

A QUICK GUIDED TOUR

Choose an example and press run.
Watch a small budget turn into
useful information and a clear
receipt.

01

Choose an example

Useful work, an
empty wallet, a
failure, or
recovery.

02

Watch the budget

See what is
held, settled,
and still
available.

03

Try the next step

Test the
spending limit
or resolve a
timed-out
request.

04

Keep the receipt

Expand each
purchase, then
save or print
the evidence.

Allowance receipt

Run rehearsal · Execution: rehearsal · Payments: mainnet preview · Data: deterministic example

Deterministic fixture. No real signatures, payments, RPC calls or model calls.

Purchase receipt

Amounts in mainnet preview USDC · simulated

Wallet snapshot

0.010000

Agent request · Fixture

Settled · delivered

Payment state	Settled · delivered (simulated)
Service outcome	delivered
Chain evidence	None — deterministic rehearsal
Request ID	fixture-snapshot
Payment network	Mainnet preview · no payment

Transaction explanation

0.020000

Agent request · Fixture

Settled · delivered

Payment state	Settled · delivered (simulated)
Service outcome	delivered
Chain evidence	None — deterministic rehearsal
Request ID	fixture-explanation
Payment network	Mainnet preview · no payment

Transaction explanation

~~0.020000~~

Separate policy probe · Fixture

denied

Payment state	denied (simulated)
Service outcome	unavailable
Chain evidence	None — deterministic rehearsal
Request ID	fixture-policy-probe
Payment network	Mainnet preview · no payment

Request exceeds the remaining allowance.

Authorized	Settled	Held	Remaining
0.040000	0.030000	0.000000	0.010000

USDC amounts cover merchant tools only. SOL fees/rent and OpenAI usage are separate. This fixture incurred no costs and has no transaction signatures.

Task received

Step 01

The fixture agent checks the permitted tools and 0.040000 USDC allowance.

Wallet snapshot reserved

Step 02

Fixture transition: 0.010000 is held while the simulated request is in progress.

Wallet snapshot delivered

Step 03

Fixture data: 1.25 SOL and two recent transaction entries.

Transaction explanation reserved

Step 04

Fixture transition: 0.020000 is held inside the per-request cap.

Transaction explanation delivered

Step 05

Fixture data: a successful 0.025 SOL transfer with a 0.000005 SOL fee.

Brief completed

Step 06

The fixture agent skips another 0.020000 tool call because only 0.010000 remains. No denied call is invented in the agent trace.

Policy probe denied before signing

Step 07

Same policy decision as the backend, using deterministic inputs: 0.020000 exceeds 0.010000 remaining. No reservation or signature created. Agent trace is unchanged.

Policy probe · separate from agent trace

THE USEFUL PART

Your wallet activity brief

The example wallet holds 1.25 SOL and has two recent transaction entries [wallet_snapshot].

Its latest transaction is a successful System Program transfer of 0.025 SOL, with a 0.000005 SOL transaction fee [transaction_explain]. The fixture supplies no identity or intent behind the transfer.

Skipped: the second transaction explanation costs 0.020000 USDC, above the 0.010000 remaining allowance.

All facts and payment transitions above are deterministic fixtures. No RPC, model, signing, or paid request occurred.

Deterministic fixture · No live RPC or model evidence
