

 Public rehearsal · Mainnet preview · No real payments 

The working example

A little budget. Useful work.

Authorize a boundary. Rehearse useful purchases, a separate denial, and an honest recovery.

RehearsalPayments: mainnet preview/Data: example only

You're in rehearsal. These are deterministic fixtures. No signing, model calls, RPC calls, or paid requests.Refreshing resets this example. Actual agent runs require the separate persistent backend.

01

Try an outcome

Read-only example

Choose an example

Two purchases + a budget boundary ▼

Useful work, inside the limit

Two example tools cost 0.030000 USDC. Then test why another 0.020000 request is blocked.

All amounts and outcomes are simulated. No funds are spent.

- 

In live mode, USDC tool charges, SOL fees and rent, and OpenAI usage are separate costs. This rehearsal incurs none.

A quick guided tour

Choose an example and press run. Watch a small budget turn into useful information and a clear receipt.

1. 01**Choose an example**Useful work, an empty wallet, a failure, or recovery.
2. 02**Watch the budget**See what is held, settled, and still available.
3. 03**Try the next step**Test the spending limit or resolve a timed-out request.
4. 04**Keep the receipt**Expand each purchase, then save or print the evidence.

1. ✓

Task receivedStep 01

The fixture agent checks the permitted tools and 0.040000 USDC allowance.

2. ✓

Wallet snapshot reservedStep 02

Fixture transition: 0.010000 is held while the simulated request is in progress.

3. ✓

Wallet snapshot deliveredStep 03

Fixture data: 1.25 SOL and two recent transaction entries.

4. ✓

Transaction explanation reservedStep 04

Fixture transition: 0.020000 is held inside the per-request cap.

5. ✓

Transaction explanation deliveredStep 05

Fixture data: a successful 0.025 SOL transfer with a 0.000005 SOL fee.

6. ✓

Brief completedStep 06

The fixture agent skips another 0.020000 tool call because only 0.010000 remains. No denied call is invented in the agent trace.

7. ⚠

Policy probe denied before signingStep 07

Same policy decision as the backend, using deterministic inputs: 0.020000 exceeds 0.010000 remaining. No reservation or signature created. Agent trace is unchanged.

Request exceeds the remaining allowance.

Authorized **0.040000** Settled **0.030000** Held **0.000000** Remaining **0.010000**
USDC amounts cover merchant tools only. SOL fees/rent and OpenAI usage are separate. This fixture incurred no costs and has no transaction signatures.

Separate policy probe

The limit held. No third payment.

The 0.020000 proposal was denied before signing. The remaining 0.010000 is unchanged.

× Denied before signing

The useful part

Your wallet activity brief

Fixture report

The example wallet holds 1.25 SOL and has two recent transaction entries [wallet_snapshot].

Its latest transaction is a successful System Program transfer of 0.025 SOL, with a 0.000005 SOL transaction fee [transaction_explain]. The fixture supplies no identity or intent behind the transfer.

Skipped: the second transaction explanation costs 0.020000 USDC, above the 0.010000 remaining allowance.

All facts and payment transitions above are deterministic fixtures. No RPC, model, signing, or paid request occurred.

 Deterministic fixture · No live RPC or model evidence
